DMTN-199

Latest Revision: 2021-07-19

Abstract

This is a response to the Controlled Unclassified Information (CUI) document from the agencies.

CUI Rubin Observatory Data Security Standards Response

1 Introduction

The agencies have provided a set of requirements for security which we asses here and provide initial cost impact analysis for.

The summary requirements (from the start of the document) are:

- 1. Encrypt data using strong, approved encryption standard, following NIST 800-171 standard for CUI at non-federal organizations.
- 2. Install firewalls to prevent unauthorized network access, guided by NIST 800-171 standard for CUI at non-federal organizations.
- 3. Delay public release of focal plane scientific data for at least 80 hours following the observation, with Alert Vetting System allowed to withhold up to 4 images per month for up to 10 days with need only for notification to be given to NSF/DOE. Delay public release of engineering and commissioning imaging data for at least 30 days.
- 4. Eliminate artificial Earth-orbiting satellites from prompt alerts by (a) automatically alerting only on streaks corresponding to motions slower than 30 deg/day relative to sidereal tracking, and (b) alerting on longer (faster) streaks only after the Alert Vetting System has determined that the streak does not correspond to an artificial satellite.
- 5. Perform Earth-orbiting satellite processing in a separate facility operated by a "trusted broker" that has access to appropriate satellite catalogs.
- 6. Publish nominal collection schedules for regular sky survey 24 hours in advance.
- 7. Request and receive advance approval of large sky regions for use without sidereal tracking prior to initial on-sky test observations; then, approved regions (for use without sidereal tracking) will be supplied to the Rubin Observatory operations team in advance of their use.

Section 3 provides a subsection response for each of these bullets.

2 Cost Summary

3 Response to the requirements

There is an implication that we should follow NIST.SP.800-171, as for any standard that is open to some interpretation. We will have to show how ew comply to the standard. This may take the form of a compliance matrix as shown in Appendix A.

We assume this applies to CUI, which we interpret as the embargoed image data hence it applies to Prompt Processing, the embargoed data store(s) and the summit in Chile. It does snot apply to DACs nor the actual alert stream.

We note SLAC should comply with NIST.FIPS.200, FIPS.99, 800-53 and 800-60 as a Federal agency. We assume our NIST 800-171 will also apply to SLAC since NIST 800-171 is derived from exactly these documents.

From Section 2.1 of NIST.SP.800-171 we note the The confidentiality impact value for the data is no less than moderate. So we may assume our NIST.FIPS.200 security category would be { moderate, low, low}¹.

3.1 Encrypt Data

3.2 Install Firewalls

3.3 Delay public release

3.4 Eliminate earth orbiting satellites

3.5 Perform earth orbiting satellite processing in separate facility

3.6 Publish nominal schedule

3.7 Request approval for non sidereal tracking

¹{confidentiality, availability,integrity}

4 Conclusion

A Compliance with NIST Standard

 $\label{thm:complex} \textbf{Table 1: This table provides an overview of the NIST.SP.800-171 and Rubin compliance with it.} \\$

NIST 800-171	Compliance	Note
3.1 ACCESS CONTROL		
3.1.1 Limit system access to authorized users, processes acting on behalf of autho-	Υ	
rized users, and devices (including other systems).		
3.1.2 Limit system access to the types of transactions and functions that authorized	Υ	
users are permitted to execute.		
3.1.3 Control the flow of CUI in accordance with approved authorizations.	Υ	
3.1.4 Separate the duties of individuals to reduce the risk of malevolent activity with-	Υ	Principle of least privilage is applied.
out collusion.		The state of the s
3.1.5 Employ the principle of least privilege, including for specific security functions	Υ	
and privileged accounts.		
3.1.6 Use non-privileged accounts or roles when accessing nonsecurity functions.	Υ	
3.1.7 Prevent non-privileged users from executing privileged functions and capture		Cristian Richard
the execution of such functions in audit logs.		
3.1.8 Limit unsuccessful logon attempts.	Υ	
3.1.9 Provide privacy and security notices consistent with applicable CUI rules.	Y	Check login notices etc.
3.1.10 Use session lock with pattern-hiding displays to prevent access and viewing of	Y	This is our policy.
data after a period of inactivity.		This is our policy.
3.1.11 Terminate (automatically) a user session after a defined condition.	Υ	
3.1.12 Monitor and control remote access sessions.	Y	
3.1.13 Employ cryptographic mechanisms to protect the confidentiality of remote ac-	Y	VPN is in use
cess sessions.	1	VFIN IS III use

3.1.14 Route remote access via managed access control points. 3.1.15 Authorize remote execution of privileged commands and remote access to	Y	Bastion flodes
security-relevant information.	1	
· · · · · · · · · · · · · · · · · · ·	Υ	All davies attaching in Chila pood to be registered by Mas address
3.1.16 Authorize wireless access prior to allowing such connections.	Ť	All devics attaching in Chile need to be registered by Mac address.
3.1.17 Protect wireless access using authentication and encryption.		
3.1.18 Control connection of mobile devices.		
3.1.19 Encrypt CUI on mobile devices and mobile computing platforms.23		
3.1.20 Verify and controllimit connections to and use of external systems.		
3.1.21 Limit use of portable storage devices on external systems.		
3.1.22 Control CUI posted or processed on publicly accessible systems.		
3.2 AWARENESS AND TRAINING		
3.2.1 Ensure that managers, systems administrators, and users of organizational sys-		
tems are made aware of the security risks associated with their activities and of the		
applicable policies, standards, and procedures related to the security of those sys-		
tems.		
3.2.2 Ensure that personnel are trained to carry out their assigned information		
security-related duties and responsibilities.		
3.2.3 Provide security awareness training on recognizing and reporting potential in-		
dicators of insider threat.		
3.3 AUDIT AND ACCOUNTABILITY		
3.3.1 Create and retain system audit logs and records to the extent needed to enable		
the monitoring, analysis, investigation, and reporting of unlawful or unauthorized sys-		
tem activity.		
3.3.2 Ensure that the actions of individual system users can be uniquely traced to		
those users, so they can be held accountable for their actions.		
3.3.3 Review and update logged events.		
3.3.4 Alert in the event of an audit logging process failure.		
3.3.5 Correlate audit record review, analysis, and reporting processes for investigation		
and response to indications of unlawful, unauthorized, suspicious, or unusual activity.		
3.3.6 Provide audit record reduction and report generation to support on-demand		
analysis and reporting.		
3.3.7 Provide a system capability that compares and synchronizes internal system		
clocks with an authoritative source to generate time stamps for audit records.		
3.3.8 Protect audit information and audit logging tools from unauthorized access,		
modification, and deletion.		
3.3.9 Limit management of audit logging functionality to a subset of privileged users.		

3.4 CONFIGURATION MANAGEMENT	
3.4.1 Establish and maintain baseline configurations and inventories of organizational	
systems (including hardware, software, firmware, and documentation) throughout	
the respective system development life cycles.	
3.4.2 Establish and enforce security configuration settings for information technology	
products employed in organizational systems.	
3.4.3 Track, review, approve or disapprove, and log changes to organizational sys-	
tems.	
3.4.4 Analyze the security impact of changes prior to implementation.	
3.4.5 Define, document, approve, and enforce physical and logical access restrictions	
associated with changes to organizational systems.	
3.4.6 Employ the principle of least functionality by configuring organizational systems	
to provide only essential capabilities.	
3.4.7 Restrict, disable, or prevent the use of nonessential programs, functions, ports,	
protocols, and services.	
3.4.8 Apply deny-by-exception (blacklisting) policy to prevent the use of unauthorized	
software or deny-all, permit-by-exception (whitelisting) policy to allow the execution	
of authorized software.	
3.4.9 Control and monitor user-installed software.	
3.5 IDENTIFICATION AND AUTHENTICATION	
3.5.1 Identify system users, processes acting on behalf of users, and devices.	
Common device identifiers include Media Access Control (MAC), Internet Protocol (IP)	
addresses, or device-unique token identifiers. Management of individual identifiers	
is not applicable to shared system accounts. Typically, individual identifiers are the	
user names associated with the system accounts assigned to those individuals. Or-	
ganizations may require unique identification of individuals in group accounts or for	
detailed accountability of individual activity. In addition, this requirement addresses	
individual identifiers that are not necessarily associated with system accounts. Orga-	
nizational devices requiring identification may be defined by type, by device, or by a	
combination of typedevice.	
3.5.2 Authenticate (or verify) the identities of users, processes, or devices, as a pre-	
requisite to allowing access to organizational systems.	
3.5.3 Use multifactor authentication for local and network access to privileged ac-	
counts and for network access to non-privileged accounts.24 25	
3.5.4 Employ replay-resistant authentication mechanisms for network access to privileged and non-privileged accounts.	
3.5.5 Prevent reuse of identifiers for a defined period.	
3.5.6 Disable identifiers after a defined period of inactivity.	
3.5.7 Enforce a minimum password complexity and change of characters when new	
passwords are created.	
3.5.8 Prohibit password reuse for a specified number of generations.	
3.5.9 Allow temporary password use for system logons with an immediate change to	
a permanent password.	
3.5.10 Store and transmit only cryptographically-protected passwords.	
3.5.11 Obscure feedback of authentication information.	
3.6 INCIDENT RESPONSE	
3.6.1 Establish an operational incident-handling capability for organizational systems	
that includes preparation, detection, analysis, containment, recovery, and user re-	
sponse activities.	
3.6.2 Track, document, and report incidents to designated officials andor authorities	
both internal and external to the organization.	
3.6.3 Test the organizational incident response capability.	
3.7 MAINTENANCE	
3.7.1 Perform maintenance on organizational systems.26	
3.7.2 Provide controls on the tools, techniques, mechanisms, and personnel used to	
conduct system maintenance.	
3.7.3 Ensure equipment removed for off-site maintenance is sanitized of any CUI.	
3.7.4 Check media containing diagnostic and test programs for malicious code before	
the media are used in organizational systems.	
3.7.5 Require multifactor authentication to establish nonlocal maintenance sessions	
via external network connections and terminate such connections when nonlocal	
maintenance is complete.	
3.7.6 Supervise the maintenance activities of maintenance personnel without re-	
quired access authorization.	
3.8 MEDIA PROTECTION	
3.8.1 Protect (i.e., physically control and securely store) system media containing CUI,	
both paper and digital.	
	<u>, </u>

3.8.2 Limit access to CUI on system media to authorized users.	
3.8.3 Sanitize or destroy system media containing CUI before disposal or release for	
reuse.	
3.8.4 Mark media with necessary CUI markings and distribution limitations.27	
3.8.5 Control access to media containing CUI and maintain accountability for media	
during transport outside of controlled areas.	
3.8.6 Implement cryptographic mechanisms to protect the confidentiality of CUI	
stored on digital media during transport unless otherwise protected by alternative	
physical safeguards.	
3.8.7 Control the use of removable media on system components.	
3.8.8 Prohibit the use of portable storage devices when such devices have no identi-	
fiable owner.	
3.8.9 Protect the confidentiality of backup CUI at storage locations.	
3.9 PERSONNEL SECURITY	
3.9.1 Screen individuals prior to authorizing access to organizational systems contain-	
ing CUI.	
3.9.2 Ensure that organizational systems containing CUI are protected during and af-	
ter personnel actions such as terminations and transfers.	
3.10 PHYSICAL PROTECTION	
3.10.1 Limit physical access to organizational systems, equipment, and the respective	
operating environments to authorized individuals.	
3.10.2 Protect and monitor the physical facility and support infrastructure for organi-	
zational systems.	
3.10.3 Escort visitors and monitor visitor activity.	
3.10.4 Maintain audit logs of physical access.	
3.10.5 Control and manage physical access devices.	
3.10.6 Enforce safeguarding measures for CUI at alternate work sites.	
3.11 RISK ASSESSMENT	
3.11.1 Periodically assess the risk to organizational operations (including mission,	
functions, image, or reputation), organizational assets, and individuals, resulting from	
the operation of organizational systems and the associated processing, storage, or	
transmission of CUI.	
3.11.2 Scan for vulnerabilities in organizational systems and applications periodically	
and when new vulnerabilities affecting those systems and applications are identified.	
3.12 SECURITY ASSESSMENT	
3.12.1 Periodically assess the security controls in organizational systems to determine	
if the controls are effective in their application.	
3.12.2 Develop and implement plans of action designed to correct deficiencies and	
reduce or eliminate vulnerabilities in organizational systems.	
3.12.3 Monitor security controls on an ongoing basis to ensure the continued effec-	
tiveness of the controls.	
3.12.4 Develop, document, and periodically update system security plans that de-	
scribe system boundaries, system environments of operation, how security require-	
ments are implemented, and the relationships with or connections to other sys-	
tems.28	
3.13 SYSTEM AND COMMUNICATIONS PROTECTION	
3.13.1 Monitor, control, and protect communications (i.e., information transmitted	
or received by organizational systems) at the external boundaries and key internal	
boundaries of organizational systems.	
3.13.2 Employ architectural designs, software development techniques, and systems	
engineering principles that promote effective information security within organiza-	
tional systems.	
3.13.3 Separate user functionality from system management functionality.	
3.13.4 Prevent unauthorized and unintended information transfer via shared system	
resources.	
3.13.5 Implement subnetworks for publicly accessible system components that are	
physically or logically separated from internal networks.	
3.13.6 Deny network communications traffic by default and allow network communi-	
cations traffic by exception (i.e., deny all, permit by exception).	
3.13.7 Prevent remote devices from simultaneously establishing non-remote connec-	
tions with organizational systems and communicating via some other connection to	
resources in external networks (i.e., split tunneling).	
3.13.8 Implement cryptographic mechanisms to prevent unauthorized disclosure of	
CUI during transmission unless otherwise protected by alternative physical safe-	
guards.	
3.13.9 Terminate network connections associated with communications sessions at	
the end of the sessions or after a defined period of inactivity.	
and end of the sessions of after a defined period of inactivity.	<u> </u>

3.13.10 Establish and manage cryptographic keys for cryptography employed in or-		
ganizational systems.		
3.13.11 Employ FIPS-validated cryptography when used to protect the confidentiality		
of CUI.		
3.13.12 Prohibit remote activation of collaborative computing devices and provide		
indication of devices in use to users present at the device.29		
3.13.13 Control and monitor the use of mobile code.	Υ	Currently we have no mobile code
3.13.14 Control and monitor the use of Voice over Internet Protocol (VoIP) technolo-		
gies.		
3.13.15 Protect the authenticity of communications sessions.		
3.13.16 Protect the confidentiality of CUI at rest.		
3.14 SYSTEM AND INFORMATION INTEGRITY		
3.14.1 Identify, report, and correct system flaws in a timely manner.		
3.14.2 Provide protection from malicious code at designated locations within organi-		
zational systems.		
3.14.3 Monitor system security alerts and advisories and take action in response.		
3.14.4 Update malicious code protection mechanisms when new releases are avail-	Υ	
able.		
3.14.5 Perform periodic scans of organizational systems and real-time scans of files	Υ	
from external sources as files are downloaded, opened, or executed.		
3.14.6 Monitor organizational systems, including inbound and outbound communi-	Υ	
cations traffic, to detect attacks and indicators of potential attacks.
